Tilapia Fish Sale – You should consider having a tilapia sale. These fish provide a natural way of keeping ponds clean. Tilapia like to eat algae that the Amur don't prefer. This eliminates the need for use of chemicals to treat algae in ponds. Also, once in the pond tilapia provide a simpler approach to pond management. There are many companies starting up to treat ponds because the homeowner does have time. Let's reduce the dependency on chemicals and go for a more natural approach. They also provide additional fingerlings which provide food for larger fish. These fish are tropical and will not survive the winter so we encourage people to fish them out in Sept /Oct. These are a very mild tasting fish and are a good addition to a health eating habit.

If this is your first time working with Remlinger Fish farm some additional things We still will provide you with a hassle-free purchase process. In order to insure this, we will place a label on each box with customer name, fish and quantity inside and total box count for the customer. The box count will be like 4 of 6 this would mean the customer order is filled once he or she has 6 boxes. Inside each box we will have a sealed bag with water, oxygen, & fish. When the fish arrive at your place, we could use assistance from your team to unload the boxes and place them by customer order. This should result in a very efficient and clean process. Provide a safe transportation for the fish and result in a successful county fish sale. The cost for boxes and delivery is free.

Thanks,
